/note="Organ: Brain; Vector: pXX- Asc; Site_1: EcoR I;
/note="Organ: Brain; Vector: pXX- Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lemnon and Soarces, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pXX-Asc vector: The library tag
sequence located between the Not I site and the polyA tail
is TGAGAGAGCC. This library was created for the University
lowa Brain Anatcowy Project (BMAP): "Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

/note="Torgan: Brain; Vector: pVX- Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcos
gel: First strand cDNA synthesis was primed with oligo-dr
gel: First strand cDNA synthesis was primed with oligo-dr
gel: First scand according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pVX-Asc vector. The library tag
sequence located between the Not I site and then cloned
directionally into pVX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGGACAG. This library was created for the University

/note="Organ: Brain; Vector: pYX-Asc; Site l: EcoR I;
Site 2: Not I; The library was constructed according
Bonaldo, Lennon and Soarse, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGAGACAG. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
program coordinator."

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMAP2 (gil 4732114)[ab]AP129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and Lransformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              347

The present invention relates to new NOVX polypeptides. The invention is useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, considerably human. The invention is also useful for treating metabolic disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, parkinson's disease, neurodegenerative disorders, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, consorted its learning and memory defects, infertility, congenital heart defects, acne, hair growth, pigmentation disorders, endocrine disorders, cepiratory disease, gastro-intestinal diseases, reproductive, health, consorted disorders, neuropsychiatric disorders and age-related disorders. The consorted in the invention and disorders. The present nucleic acid sequence represents a NOVX gene. This sequence consorted in the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a coding sequence for a NOV protein. The NOV proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, AIDS, diabetes, obseity, asthma, Igh nephropathy, cirthosis, arthritis, Alzheimer's disease, infections (e.g. bacterial, viral, parasitic), stroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. NoV1 is a TEN-M4 like protein and the NOV1 gene is localised to chromosome 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4627

The invention relates to an isolated polypeptide comprising CGDD1-12 (cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to GGDD, a biologically active fragment or an immunospenic fragment. Also included are the comprising a promoter sequence operably linked to the GGDD opport of the CGDD comprising a promoter sequence operably linked to the CGDD opport or a transgenic organism comprising which the recombinant polymucleotide, a cell transformed with the recombinant polymucleotide, a transgenic organism comprising the recombinant polymucleotide, a transgenic organism comprising the recombinant polymucleotide, a transgenic organism comprising the recombinant polymucleotide, an anti-cGDD polymucleotide microarray. The expression of GGDD polymucleotide of GGDD polymucleotide microarray. The polypeptides, polymucleotide and a cGDD polymucleotide microarray. The polypeptides, polymucleotide and a preventing disorders associated with aberrant expression of GGDD, polymucleotides, paroxysmal nocturnal haemoglobinuria, polycthaemia or arteriosclerosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycthaemia or enrological disorders (e.g. arteriosclerosis, desease or epilepsy), reproductive disorders (e.g. infertility or a disruption in the mensitual oycle, or autoimmune/inflammatory disorders (e.g. Alzheimer disease, parkinson's disease or epilepsy), reproductive disorders (e.g. infertility or a disruption in the mensitual oycle, or autoimmune/inflammatory disorders (e.g. Alzheimer disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact derm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ostecarthritis, osteoporosis, pancreatitis, rheumatoid arthritis, uveitis, or viral, bacterial, fungal, parasitic, protozoal or helminthic infections. They are also useful in the assessment of the effects of exogenous compounds on the expression of mucleic acid and amino acid sequences of proteins associated with CGDD. The present sequence encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                LysileAsnArgileArgGlnValThrThrSerGlyGluIleSerieuValAlaGlyAla

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, noticopic, cardiovascular, antidiabetic, anticonvulsant, cardiovascular, antidiabetic, anticonvulsant, cardiovascular, immunosuppressive, antiallergic, antianthriticit, virucide, protozoadide and antihielminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicamen for treating a syndrome associated with a communication of a medicamen for treating a syndrome associated with a condition of a medicamen for treating a syndrome associated with a condition of an electron NOVX-associated disorder, such as cancers of e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus, neurological disorders (e.g. epilepsy, stroke, cischaemic cerebrovascular transport (e.g. cystic fibrosis, disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic produce antibodies and as vaccines. The NOVX proteins can be used as immunogens to reach in chromonome anaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       et CAM, Eisen A, Liu X;

WPI; 2002-732706/79. P-PSDB; ABP53589 New NOVX polypeptides and polymucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune

Claim 8; Page 123-125; 444pp; English

diseases

The present invention describes novel human proteins designated NOVK, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, carchostalic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidabetic, antiinflammatory, antiheumatic, antiarthritic, virucide, immunosuppressive, antiallergic, antihanemic, antibaterial, fungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, uncleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, discheders of vesicular transport (e.g. cystic fibrosis, disease), disease, or gostro, gastrointestinal

New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune diseases

Claim 8; Page 114-117; 444pp; English.

The present invention describes novel human proteins designated Novx, where X is 1 to 20 e.g. NoV1. NoVX sequences can have neuroprotective, where X is 1 to 20 e.g. NoV1. NoVX sequences can have neuroprotective, where X is 1 to 20 e.g. NoV1. NoVX sequences can have neuroprotective, crytostatic, antidoctive, cardiovascular, antidiabetic, antidoctive, antidoctive, antidoctive, antidoctive, antidoctive, antidoctive, antidoctive, antidoctive, antidoctive, antidoctive, antidoctive, and can be used in gene therapy. The NoVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a therapy. The NoVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a covary, testis and uterus, neurological disorders (e.g. epilepsy, stroke, covary, testis and uterus, neurological disorders (e.g. epilepsy, stroke, covary, testis and uterus, neurological disorders or pick's diabetes mellitus, Grave's disease, Alzheimer's disease or Pick's diabetes mellitus, Grave's disease, or goitre), gastrointestinal continumume diseases (e.g. allergic reactions, autoimmume hamolytic and protozoal infections. The NoVX proteins can be used as immunogens to controinted antibodies and as vaccines. The NoVX nucleotide sequences may be used in chromosome mapping, identifying individuals from minute control or contro located on chromosome 4

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, noticapic, cardiovascular, contidiabetic, antiinflammatory, antirhemmatic, antiarthritic, virucide, immunosuppressive, antiallergic, antianaemic, antiarthritic, virucide, immunosuppressive, antiallergic, antianaemic, antibacterial, fungicide, protozoacide and antihelminhic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder. Such as cancers (e.g. elutaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, covary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzneimer's disease or pick's disease, disease, disease, or goitre), gastrointestinal disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), candennia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological sample. The present sequence encodes human Novisa, which is located on chromosome a

The present invention relates to methods of detecting a prostate cancerassociated transcript in a cell from a patient. The method comprises contexting a bloogical sample from the patient with prostate cancerassociated polynucleotides (designated PC genes) that selectively bybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer of associated genes are useful for diagnosing or treating prostate cancer. Cas well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

The polynuclectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, nemanopolesis regulating activity, itssue growth factor activity, immunomodulatory activity and activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated polynucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, allinical medicine and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                New isolated human differentially-regulated breast cancer polymucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer.

differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
New isolated human differentially-regulated breast cancer polynucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast

The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the nucleic acids encoding them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, carcinomas, melanomas, giorders including myelogenous leukaemia, carcinomas, melanomas, astrocytomas, congenital neonatal alloimmune thrombocytopaenia, neurological disorders, neurodegenerative cisorders, neurodegenerative cisorders, neurodegenerative myelodysplastic syndrome, mental health conditions, immunological myelodysplastic syndrome, mental health conditions, immunological cisorders, allergy and infection, bronchial asthma, Avellino type cosinophilia, lung diseases, reproductive disorders, infertility, male desmoid disease, turcot syndrome, liver cirrhosis, hepatitis C, gastric disorders, pancreatic diseases such as diabetes, Schistosoma mansoni infection Spinocerabellar ataxia, plasmodium falciparum parasitaemia, corneal dystrophy-dreonouw type I, corneal dystrophy-lattice type I and he remos hem mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental mental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4608 GCCTCGGACTGCGAAAAGATGATCCAATTGCAACTGCTATTCAGAGATGATGCC 4667

                                                                 ò
                                                                                        The invention relates to FCTRX polypeptides and the polynucleotides encoding them. The sequences of the invention are useful for the manufacture of a medicament for diagnosing and treating disorders associated with the FCTRX polypeptide, such as colorectal cancer, adenomatous polyposis coli, myelogenous leukaemia, congenital neonatal adenomatous polyposis coli, myelogenous leukaemia, congenital neonatal cumours, mammary tumours, human gliomas, astrocytomas, renal cell carcinoma, breast adenocarcinoma, ovarian carcinoma, melanomas, clear carcinoma, breast adenocarcinoma, neurological disorders, cell and granular cell carcinomas, neurological disorders, coll and granular electromas, neuropathy, Gardner syndrome, mental health syndrome, Charcot-Marie-Took neuropathy, Gardner syndrome, mental health conditions, immunological disorders, allergy and infection, methal health diseases, male and female reproductive disorders, dasfness, glycoprotein deficiency, desmoid tumour, turcot syndrome, liver cirrhosis, hepaticis conditions, spinocrebellar ataxia, plasmodium falciparum infection, infection, gromeal dystrophy and lattice corneal dystrophy. This sequence represents cDNA encoding an FCTRX polypeptide of the invention.

The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the nucleic acids encoding them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, carcinomas, melanomas, gliomas, astrocytomas, congenital neonatal alloimmune thrombocytopaenia, neurological disorders, neurodegenerative carcinomas, terminal myelodysplastic syndrome, familial myelodysplastic syndrome, carcinome, familial myelodysplastic syndrome, mental health conditions, immunological myelodysplastic syndrome, mental health conditions, immunological disorders, allargy and infection, bronchial asthma, Avellino type cosinophilia, lung diseases, reproductive disorders, infertility, male and female reproductive disorders, glaycoprotein la deficiency, desmoid disease, turcot syndrome, liver cirrhosis, hepatitis C, gastric desmoid disease, turcot syndrome, liver cirrhosis, hepatitis C, gastric disorders, pancreatic diseases such as diabetes, Schistosoma mansoni infection Spinocerebellar ataxia, plasmodium falciparum parasitaemia, corneal dystrophy-dreconow type I, Corneal dystrophy-lattice type I and remained the corneal dystrophy. This sequence represents DNA encoding
                                                                                                                                                                                                                    polypeptides designated as FCTRX polypeptides, useful in detection,
                                                                                                                                                                                                                                          prevention and treatment of a broad range of pathological states.
                                                                                                                                                                                                                                                                                          Claim 9; Page 33-35; 215pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FCTR3b, a neurestin-like protein
                                                                         Fernandes E,

The invention relates to FCTRX polypeptides and the polynucleotides encoding them. The sequences of the invention are useful for the encoding them. The sequences of the invention are useful for the encoding them. The sequences of the invention are useful for the manufacture of a medicament for diagnosing and treating disorders associated with the FCTRX polypeptide, such as colorectal cancer, adenomatous polyposis coli, myelogenus leukaemia, congenital neonatal cautoimmune thromborytopenia, malignant ovarian tumours, malmant breast adenocarcinoma, voraian carcinoma, melanomas, clear carcinoma, breast adenocarcinoma, ovarian carcinoma, melanomas, clear carcinoma, breast adenocarcinoma, neurological disorders, coll and granula disorders, nerve trauma, familial myelodysplastic syndrome, Charcot-Marie-Tooth neuropathy, Gardner syndrome, mental health conditions, immunological disorders, allergy and infection, asthma, lung diseases, male and female reproductive disorders, dafeness, glycoprotein deficiency, desmoid tumour, turcot syndrome, liver cirrhosis, hepatitis cordition, spinocerebellar ataxia, plasmodium falciparum infection, groenouw's corneal dystrophy and lattice corneal dystrophy. This sequence corneal colling an FCTRX polypeptide of the invention.
                                                                                                                       New FCTRX polypeptide and encoding polynucleotide, useful for preventing or treating FCTRX-related disorders, such as cancer, autoimmune, neurodegenerative, gastrointestinal, reproductive and inflammatory
